### Abstract

The objective of this study is to describe law on protection of public health with respect of environmental friendly production. Since everyone has the right to live in a healthy environment, it is duty of governments to improve environment quality, and to prevent environmental pollution.

Law on safety and healthy environment should ensure everyone leads their lives in the world. Governments shall create good environment by utilizing public and private sectors prevents. In order to establish widespread safety and healthy environment, public health law, social insurance law, and labor law have to be known by public and private sectors.

All necessary measures against hazards provide healthy working places and accommodation. Some articles of law on protection of public health provide protection of young and child workers. Social insurance law is definition of occupational accident, disease, and compensatory obligation of employer. Labor law takes all measures, equipments, inspects, information, and notification.

### 1. Introduction

There are problems of providing health of young and child workers in the world mainly developing countries even though some articles of law on protection of public health provide protection of young and child workers. For examples; Social insurance law is definition of occupational accident, disease, and compensatory obligation of employer. Labor law takes all measures, equipments, inspects, information, and notification.

In this case, the employer has to create safety conditions for the workers in the workplaces where more than 50 employees are employed in Turkey. If some conditions of company cause death of worker, the dependents of worker have the right to apply for compensation for the damages. Under this situation, employment is not easy for employers since, it is not easy to provide protection of workers.

Beside Law on safety and healthy environment, Governments should ensure good employment condition for employee in workplaces with the way of environmental friendly production where widespread safety and health structure occurs. Used oil collection centers, management hazardous and non-hazardous wastes, minimizing the amount of waste from the commercial printing industry (screen, lithographic, flexographic), simple recycling and reused, quantity generator, Air conditions-lighting, and boiler uses are some implementation of environmental friendly workplaces. Toxicity Characteristic Leaching Procedure (TCLP) analysis is a method for environmental friendly production workplaces. TCLP simulates landfill conditions. Over time, water and other liquids percolate through landfills with respect of environmental health risks.

The objective of this study is to describe law on protection of public health with respect of environmental friendly production and to discuss additional ways for workplaces as environmental friendly production.
